

TECHNICAL REQUIREMENTS AND RECOMMENDATIONS

Stage size

We recommend stage size about **5x4m (for 5+1 show)** and **8x4m (for 7+1 show)**. But we did shows even using smaller stage in clubs and discos. It just looks better if the dancers are a bit more far away from each other, show looks greater.

Stage height

We recommend **at least 3m** high stage. It looks a lot better, if the stage is higher though.

Lighting conditions

Total dark is ideal for Tron Dance/Tron Girls performance. But we did shows in shopping malls, where there was quite a lot of light. The most important thing is to have dark background behind the stage.

Additional lighting effects

We don't recommend to use additional lightning for the show, **except for lasers**. If the lights are on, black suits can be still visible. Lasers don't light up surrounding environment, thus are good addition to Tron Dance/ Tron Girls performance. If additional light effects are required, at least we recommend to aim them to surrounding area (not the stage with the dancers).

Audio requirements

We recommend to use good quality audio with **strong bass**. It's a lot better when audience can actually feel the beats.

Rehearsal

Every stage is a bit different and we strongly recommend to perform **at least one rehearsal** to test all the equipment.

Stage Floor

We recommend to use **matte carpet** on the stage, so the light from costumes is not reflected on the stage.

Audio

We use standard notebook to play audio file synchronously with the light show. If it's required, we can also receive **MIDI/LTC time code** (Please let us know in advance, so we bring all the necessary equipment).

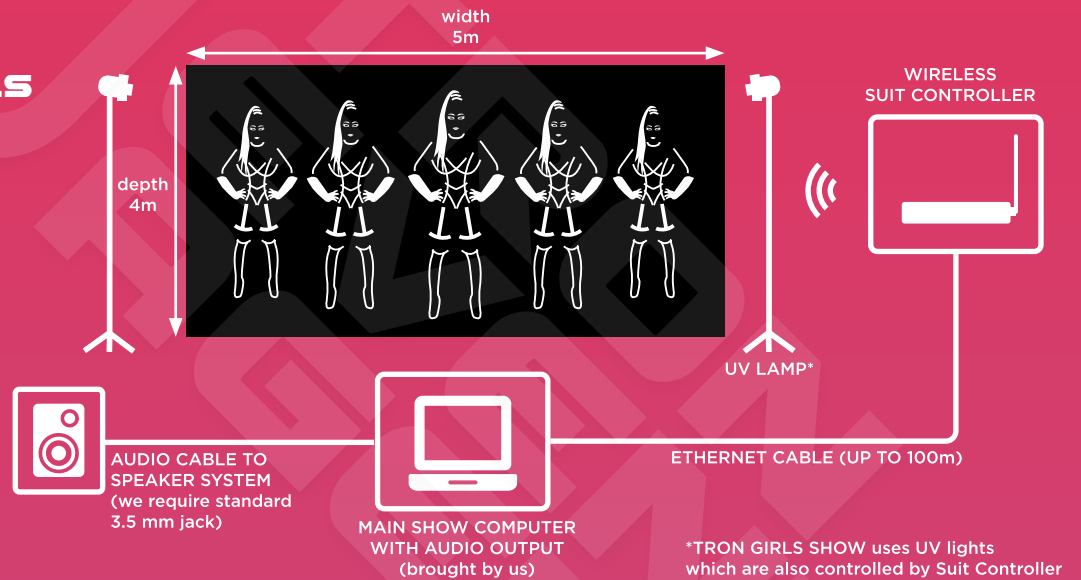

TYPICAL INSTALLATION

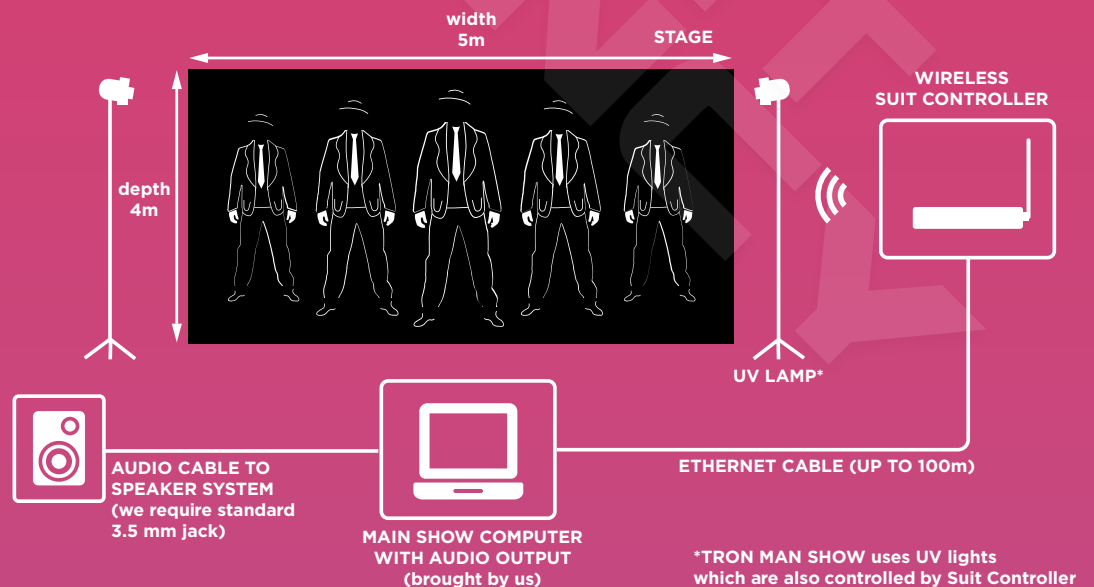

TRON DANCE

TRON GIRLS

TRON MAN

We use one computer to control complete show. This computer sends signal over Ethernet to wireless suit-controller. Each suit receives its own signal, so we can control it separately.

For booking **Tron Dance** or **Tron Girls** performance
